

Towel Descriptions

653 – TOWEL BAR TERRY

Our terry bar towel is for use in areas such as wiping counters and tables. It's very absorbent and is ideal for light to medium soil in general cleaning jobs. No heavy grease or scorching heat please!

654 – TOWEL F & B MICRO

Our F & B towel is for drying and polishing in light to medium soil applications. It's virtually lint less, making it perfect for glass and flatware. No heavy grease or scorching heat please!

650 – TOWEL CLEANING

Our cleaning towel is perfect for heavy soil. It loves grease and grime and can withstand what you give it! Very absorbent, utility grade, and designed to handle the tough stuff. No scorching heat please!

652 – TOWEL GRILL PAD

Our grill pad can take the heat! Use it where heat, grease, and grime are present. Layered to protect your hands and handle the heat, this towel is great for cleaning grills, pots, pans, and other high heat, heavy soil applications.

700 – TOWEL INDUSTRIAL MICRO

Our industrial towel is virtually lint less and can be used where polishing and detail work is done – great for Automotive Make Ready and metal / glass polishing.

Falls

With predictable regularity, falls continue to be a leading cause of accidents and deaths on the job. Falls include those on the same level (floor, ground), as well as from one level to another (stairs, ladders, roof, etcetera). They can be caused by either or both of two reasons - an unsafe action of an individual (hurrying, overreaching, improper use of equipment, etc.) or unsafe condition of the situation (poor housekeeping, unguarded opening, surface condition, etcetera).

Good footing is the best way to avoid falls and good housekeeping is the best way to ensure good footing. Trash, wires, and slippery areas caused by water, grease, or oil can cause falls. Watch footing when working on slick flooring and poorly lit areas; where floors are uneven from room to room; and where surfaces are uneven from broken concrete, cracked asphalt or curled rugs. Always look in the direction you are walking. Avoid carrying large objects that may block your view of a safe walking path. Walk slowly on stairs and use handrails to secure your step.

Cover, guard, or mark spills, potholes, and floor openings. Protect them with warning cones, guardrails, or toeboards. Except for normal doorways, protect wall openings and stairways through which someone could fall. The protection should be sufficiently strong and secured to prevent it from being removed.

Makeshift ladders or incorrect ladder selection can cause falls. Choose the ladder that's made for the job. Be sure it's in good condition and placed securely. Face the ladder and keep both hands free while climbing.

Preventing falls is a matter of common sense. Watch where you're walking. Take careful steps when you walk and choose and use equipment properly.
